PROFESSIONAL SUMMARY

Senior Front-End Engineer with 4+ years of experience architecting high-concurrency crypto exchanges, fintech platforms, and real-time Web3/SaaS products with React 19, TypeScript, and Next.js. Specialist in low-latency front-end architecture, WebSocket synchronization, state management, and Core Web Vitals optimization. Fluent English communicator (Full Professional Proficiency with an academic background in English Literature) with extensive experience in asynchronous collaboration, technical documentation, and remote-first engineering teams.

TECHNICAL SKILLS

Front-End & Core:	JavaScript (ES6+), TypeScript, React 19, Next.js (App Router/SSR/SSG), AngularJS, HTML5, CSS3
State & Data:	Zustand, TanStack Query (React Query), Redux Toolkit, Context API, WebSockets, REST APIs, GraphQL, Apollo
UI & Performance:	Tailwind CSS, Panda CSS, styled-components, Sass/Less, CSS Logical Properties (RTL/LTR), a11y, Core Web Vitals
Testing & Tooling:	Jest, React Testing Library, Cypress, Storybook, Vite, Webpack, Docker, CI/CD, Git/GitFlow, Sentry

PROFESSIONAL EXPERIENCE

Senior Front-End Developer at [RBTex](#) Dec 2024 – Present

Crypto payments and exchange platform | Remote, Full-time

- Architected and delivered real-time crypto payments and exchange dashboards with React 19, Next.js, and TypeScript, owning front-end technical design through production release.
- Reduced initial page-load time by ~30% through route-level code splitting, lazy loading, tree shaking, and performance budgets focused on Core Web Vitals.
- Established scalable state management, component testing, and CI/CD standards for continuous high-volume data streams; reviewed code and mentored junior engineers.
- Partnered with backend and design teams to ship accessible, reusable UI components and maintain responsive financial workflows.

Front-End Developer at [Pendar Ideas \(DivanHR\)](#) May 2024 – Dec 2024

Enterprise HR software | Full-time

- Identified maintainability bottlenecks in legacy portal, built React POC, and secured leadership approval to lead phased migration.
- Migrated ~30 screens (75% of portal) from AngularJS/jQuery to React in 5 months using side-by-side rollout and feature flags with zero downtime.
- Designed and versioned an internal @ui-core component and hooks library with automated build pipelines for admin engineering teams.
- Launched "Good Vibes" peer-recognition feed with leaderboards and real-time alerts, increasing daily active users by approximately 5–8%.

Front-End Developer at [Bitbine](#) May 2023 – Apr 2024

Crypto trading platform | Full-time

- Rearchitected trading interface with TanStack Query and custom WebSocket manager for throttling, delta-merging, and reconnect backoff for 2,000–3,000 concurrent users.
- Optimized real-time order books and candlestick charts for ~300 ms deltas using Map-based O(1) updates and memoized transforms, cutting render times from ~50 ms to < 5 ms.
- Decoupled volatile price tickers from order execution forms using Zustand and memoized selectors, eliminating unwanted re-renders across the trading workspace.
- Introduced Jest and React Testing Library coverage for order-critical logic plus Cypress E2E tests in CI, reducing emergency rollbacks by approximately 50%.

Front-End Developer at [Imorit](#) Apr 2022 – Mar 2023

Digital agency | Full-time

- Delivered ~25 responsive React screens across client projects from Figma designs, using CSS logical properties for multi-directional layout support.
- Built a branded, animated meeting-room booking calendar with react-big-calendar highlighted in client feedback.
- Created a reusable Sass component library that reduced new project setup time from ~4–5 hours to ~1 hour; achieved 90+ Lighthouse performance scores.

EDUCATION & TRAINING

- Bachelor of English Literature**
Shahid Bahonar University of Kerman (2017 – 2020)
- Full-Stack Development (MERN)**
Karademy Professional Program (2021 – 2022)

LANGUAGES & WORK MODEL

- English:** Fluent (Full Professional) | **Persian:** Native
Asynchronous communication • Technical writing • B2B Contractor ready
- Distributed Engineering**
Agile sprints, code reviews, timezone overlap (CET / GST)
